Showcase description

I started my professional career in 1982 in a study in the historical center of Verona in Piazza Broilo at No. 3. For 8 years I worked on graphics, furniture and design objects. I made prospects for the projects of the most renowned architects Veronesi then. In December of 1988, I bought my first computer terminal built around the glorious Macintosh Apple IIe. With the experience gained on it I became a consultant in the field of computer graphics. For many years I have devoted myself entirely to consulting, sales and service of computer products. Today I feel the need to go back to do my job.
