Showcase description

My name is Simone (30 years old), I am an Italian Engineer with a BA in Information and Automation Engineering with a thesis on databases backup and replication. I work in a consulting firm in Rome as a QlikView Developer in projects for leading client companies in Italy (Telecom Italia, TIM, PosteMobile, SEA Milano, Q8, Barilla, Ferrero, etc...). I have strong competences about all the SAP BW and QlikView Processes: - Data modeling; - Knowledge of SQL language and PseudoMDX; - Extraction of data from SAP BW (Tables, DSO, Query, Infocube.....) with SAP connectors; - Staging and ETL processes in Qlikview; - Report developing and design in Qlikview, and dashboard layout presentation (pivot table, graphics, bookmarks, ecc...) - Knowledge of the management console for the report publishing and distribution with the definition of the tasks for the data reload schedule. - SAP HANA best practices My native language is Italian and I'm fluent in English. I'm willing to start an experience abroad to have the opportunities to experiment new environments as I learnt how important it is to be flexible and make use of my own resources. I also use to help friends with website development (HTML, Javascript, PHP, jQuery) during my spare time.
